

## PRE ANALYTICAL SOLUTION

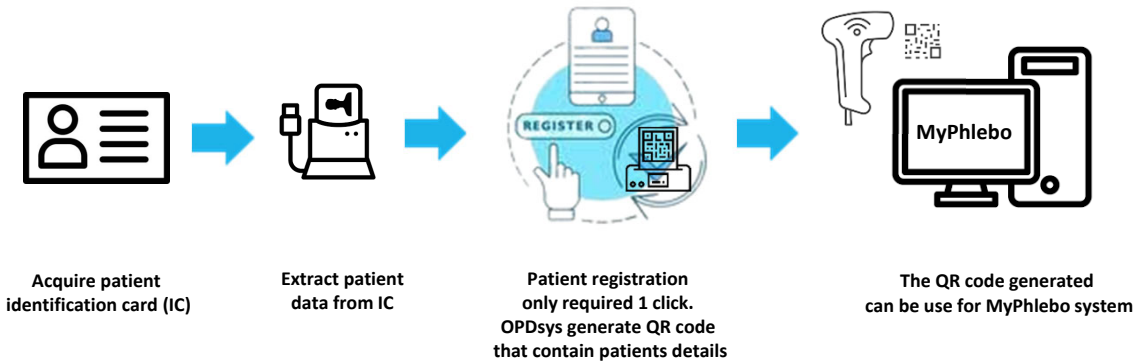

### OPDsys© System

OPDsys is a Pre Analytical Solution software focusing on the patient registration part to reduce and eliminate the error that caused by manual registration.

OPDsys is designed for patient safety by ensuring the accuracy of patient's information during registration. Patient's information will be captured from MyKad and converted into a QR code. The generated QR code is encrypted to ensure the integrity of patient information. Hence, the generated QR code only can be scanned by the MyPhlebo system for the blood collection process.

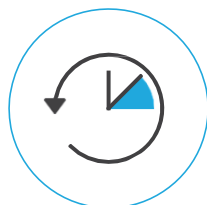

### OPDsys Workflow

### OPDsys Benefits

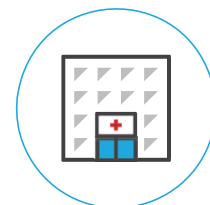

Prevent Identification Errors

Cut Wait Time

Improved Convenience

Enhanced Image
